### Finishing filler FEIN

The fine-grained finish polyester filler. It is used for the final sealing of - create a surface which has the same hardness throughout the area, as well as to eliminate the micro roughness formed coarse grit (no scratches). The use of fillers to avoid "stroke", allowing a smooth transition from one surface to another. It is applied in thin layers using rubber spatula. Scratch the surface to be processed as before priming.

### For professional use only

**How to use:** Apply the filler in the package thoroughly before use. Put the required amount on a clean and dry surface and mixed with the hardener in the ratio of 100 g BPO putty to 2-3g. hardener. Care should be taken within the mixing ratio, as when I change occurs or discoloration of the surface paint or tape the abrasive
